CENTRAL FIRE STATION, PRAGUE AIRPORT

The fire station is designed for a special type of vehicles which are used on airports in a 24-hour-service, new fire protection technologies, emergency drills, and the sharing of information. It takes only a few seconds to drive out. The building is a base for firemen, also housing a dining area, recreational spaces, offices and a control centre, which are all situated above the main garage, in the shape of a green linear flame.
